Guess the number

How many claims are in each text?

A The requirements must be documented so that they can be identified and taken into account during planning, operation, and procurement.

B Without binding password rules, there is a risk of weak or reused passwords that can be easily compromised.

C Issuance and revocation of entry, access, and usage media must be documented and replaced immediately if compromised.

What is a claim?

Everyday, whole	A claim is a sentence that states something.
Everyday, granular	Every clause that states something is a claim: main clause and subordinate clause count separately.
Logic	A claim is something that can be true or false on its own. Every element of a list counts for every action it belongs to.
Working definition	A claim is the smallest part of the reference answer that can be checked at one place in the Kompendium.

Working definition

A claim is the smallest part of the reference answer that can be checked at one place in the Kompendium.

1. Every action (document, replace) is its own claim.
2. Every reason (because) and every purpose (so that) is its own claim.
3. A list that the Kompendium states as one list stays one claim.
4. Repetitions and filler do not count.

Example A: how many claims?

The requirements must be documented so that they can be identified and taken into account during planning, operation, and procurement.

Everyday, whole	the whole sentence	1
Everyday, granular	1) The requirements must be documented 2) so that they can be identified and taken into account during planning, operation, and procurement	2
Logic	1) The requirements must be documented. 2) Documented requirements can be identified. 3) Documented requirements can be taken into account during planning. 4) ... during operation. 5) ... during procurement.	5
Working definition	1) Requirements must be documented. 2) Purpose: identify requirements. 3) Purpose: take into account during planning. 4) Purpose: during operation. 5) Purpose: during procurement.	5

Example B: how many claims?

Without binding password rules, there is a risk of weak or reused passwords that can be easily compromised.

Everyday, whole	the whole sentence	1
Everyday, granular	1) Without binding password rules, there is a risk of weak or reused passwords 2) that can be easily compromised	2
Logic	1) Without binding password rules, there is a risk of weak passwords. 2) Without binding password rules, there is a risk of reused passwords. 3) Weak passwords can be easily compromised. 4) Reused passwords can be easily compromised.	4
Working definition	1) Without password rules: risk of weak passwords. 2) Without password rules: risk of reused passwords. 3) Weak or reused passwords are easy to compromise.	3

Example C: how many claims?

Issuance and revocation of entry, access, and usage media must be documented and replaced immediately if compromised.

Everyday, whole	the whole sentence	1
Everyday, granular	1) Issuance and revocation of entry, access, and usage media must be documented 2) and replaced immediately if compromised	2
Logic	1) Issuance of entry media must be documented. 2) ... access media ... 3) ... usage media ... 4) Revocation of entry media must be documented. 5) ... access media ... 6) ... usage media ... 7) Entry media must be replaced immediately if compromised. 8) Access media ... 9) Usage media ...	9
Working definition	1) Issuance of entry, access and usage media must be documented. 2) Revocation of entry, access and usage media must be documented. 3) Entry, access and usage media must be replaced immediately if compromised.	3

Guess the number, round 2

A claim is the smallest part of the reference answer that can be checked at one place in the Kompendium.

1. Every action (document, replace) is its own claim.
2. Every reason (because) and every purpose (so that) is its own claim.
3. A list that the Kompendium states as one list stays one claim.
4. Repetitions and filler do not count.

A The requirements must be documented so that they can be identified and taken into account during planning, operation, and procurement.

B Without binding password rules, there is a risk of weak or reused passwords that can be easily compromised.

C Issuance and revocation of entry, access, and usage media must be documented and replaced immediately if compromised.

What RAGAS tells the judge

The instruction to the judge, verbatim:

Given a context, and an answer, analyze each statement in the answer and classify if the statement can be attributed to the given context or not.

No definition. The judge decides for itself what a claim is.

Companies can apply for pilot projects and receive 2 to 3 days per week of active project support to develop a prototype together. They can also use the computing infrastructure.

gpt-oss-120b

2 claims

mostly splits per sentence

llama-3-3-70b

4 claims

splits finer

The same reference answer from notebook 2, section E b. The denominator of Context Recall depends on who splits.
